

2025-03-18 Group 4

Scrum Master:

Shawn Crook

Attendees:

- Quinton Grant
- Micah Peltier
- Stephen Laing
- Shawn Crook

Agenda:

- Verify progress
- CDD (Shawn)
- File Validation (Shawn)
- User Requirements (Quinton)
- Save functions (Micah)
- UVU colors (Stephen)
- Custom Colors (Quinton)
- Update Readme (Shawn)

Topics discussed:

- Highlight focus to make clear what needs to be done for user
- QoL change : Don't require explicit sign, if no sign assumes positive? (Shawn)
- Create label "What valid instruction looks like", "what do do, press enter etc.", formatting for user (Shawn)
- Update visuals, change font sizes based on To-Do from last submission (Stephen)

Action Items:

To do:

- Make your user requirements clear, testable, consistent, traceable, complete, etc.
- Make the inputs, outputs, and purposes explicit in the class definition document
- Improve the GUI visual hierarchy so the most important information grabs the user's attention. You should make the words loaded from the file smaller, make the values in the PC, Accumulator, and status bigger, and consider putting the input and output fields closer to the messages so the user isn't at opposite ends of the interface to see these.
- Find a way to inform the user to hit enter for input to be accepted or add a button
