

2025-03-04 Group 4

Scrum Master:
Shawn Crook

Attendees:

- Quinton Grant
- Micah Peltier
- Stephen Laing
- Shawn Crook

Agenda:

- Code Changes from Milestone 3
- Deliverables for Milestone 4
 - Color Scheme 'branding'
 - Custom Color Scheming
 - File Input Error Validation
 - Add/Modify commands in GUI (Done?)
 - Save/Load files (Load is done? Save?)
- Update Docs to match updates at end

Topics discussed:

Action Items:

- Shawn will update class definition document
- Quinton will update User Requirements
- Check in with Stephen about Use Case submission from Milestone 3
- Quinton will create custom color schemes
- Stephen will set UVU color scheme default (styling)
- Micah will create save/load functions for file input
- Shawn will ensure file validation
- Quinton will refactor (Done by 3/13)

To do:

- Make your user requirements clear, testable, consistent, traceable, complete, etc.
- Make the inputs, outputs, and purposes explicit in the class definition document
- Improve the GUI visual hierarchy so the most important information grabs the user's attention. You should make the words loaded from the file smaller, make the values in the PC, Accumulator, and status bigger, and consider putting the input and output fields closer to the messages so the user isn't at opposite ends of the interface to see these.
- Find a way to inform the user to hit enter for input to be accepted or add a button
